

Example 01 — Business Meeting Update

What this demonstrates: How a tuned prompt dramatically improves accuracy on business jargon, acronyms, and tool names that Whisper commonly mishears or lowercases (e.g. "okrs" instead of "OKRs", "salesforce" instead of "Salesforce").

INITIAL_PROMPT to Use

This is a recorded business meeting. Attendees are discussing Q3 results, OKRs, project roadmaps, and action items. Speakers may reference tools like Salesforce, Jira, Slack, Confluence, and DevOps pipelines. Use professional capitalization and punctuation throughout.

Recording Script

Read naturally, as if giving a status update to your team on a Zoom call.

Aim for a conversational pace — about 60 to 75 seconds.

Okay everyone, let me give you a quick update on where we stand heading into Q3.

So, we wrapped up the Salesforce integration last week — big win for the team. The data is now flowing cleanly into the pipeline and our KPIs are looking much stronger than they did at the Q2 review.

On the Jira board, we've got three OKRs still in progress. The first two are on track to close by end of sprint. The third — the stakeholder reporting dashboard — has slipped a bit. We're working with the UX team to finalize the wireframes, and I'm expecting sign-off by Thursday.

For action items coming out of today: Sarah needs to update the Confluence page with the new workflow, and Marcus should loop in DevOps about the staging

environment before we push to production.

I'll drop a full written summary in Slack by end of day. Any questions before we move on?

Output Files

After transcribing, save your outputs here with these names:

File	Description
01_business_meeting_no_prompt.vtt	Transcribed with INITIAL_PROMPT = ""
01_business_meeting_no_prompt.srt	Transcribed with INITIAL_PROMPT = ""
01_business_meeting_no_prompt.txt	Transcribed with INITIAL_PROMPT = ""
01_business_meeting_tuned.vtt	Transcribed with the prompt above
01_business_meeting_tuned.srt	Transcribed with the prompt above
01_business_meeting_tuned.txt	Transcribed with the prompt above

What to Look For

Compare how Whisper handles these words across the two runs:

- OKRs / KPIs / Q3 / Q2 — does it capitalize correctly?
- Salesforce / Jira / Slack / Confluence — does it recognize product names?
- DevOps — does it render as one word with correct casing?
- Punctuation — does the tuned version produce cleaner sentence breaks?
